

1

All available samples = 100 %

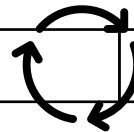

2

Train **set**, i.e., 80 % of all available samples

Test **set**, i.e., 20 % of all av. samples

3

Train **fold**, i.e., 80% of Train set

Development **fold**, i.e.,
20 % of Train set

Use for **cross-validation** in order to:

- estimate robustness by reporting standard deviation of performance between **folds**
- Tune hyperparameters for your model

Use only to report an estimator of
your model's performance when
deployed.
